SUMMARY

Software engineer who builds and ships production web applications from concept to deployment. Created two live apps (PayTogether and myFPL) with integrated payments, authentication, real-time data, and comprehensive testing. Experienced with the modern JavaScript ecosystem and passionate about delivering polished, user-focused products.

EXPERIENCE

Independent Software Engineer | MajaLabs LLC | August 2025 - Present

- Built and shipped PayTogether, an expense-splitting app with receipt scanning, group management, and subscription billing. Live on Android, and web as a PWA. Tech stack: Next.js 15, React 19, Firebase (Auth + Firestore), Stripe, OpenAI API. Includes comprehensive test coverage with automated testing (Vitest + Playwright).
- Developed myFPL, a Fantasy Premier League assistant with scoring algorithms and transfer recommendations. Designed multi-layer caching to handle API rate limits. Tech stack: Next.js, Supabase (PostgreSQL + Auth), Stripe. Live in app stores.
- Integrated Stripe payment infrastructure including subscriptions, webhook verification, customer portal, and duplicate payment prevention.
- Implemented authentication and authorization with Firebase Auth and Supabase Auth, including session management, protected routes, and PostgreSQL Row Level Security policies.
- Designed and implemented UI/UX for both applications including custom theming system, responsive layouts, and mobile-first Progressive Web App capabilities.

Knowledge Engineer | Droit Fintech | Sept 2023 - Present

- Translate evolving regulatory requirements into client-facing specifications and executable decision logic in partnership with compliance, legal, and engineering.
- Support triage of regulatory questions and incidents, determine required changes, and update logic and specifications.
- Update team leads and stakeholders on relevant regulatory developments and implementation status to support informed decision making.

Software Engineer Fellow | AWS | Sept - Dec 2022

- Contributed to AWS Amplify open source projects, participating in code reviews and feature implementation for developer tooling.

SKILLS

Languages & Core: JavaScript, TypeScript, SQL, HTML/CSS

Frontend: Next.js, React, Tailwind CSS, Progressive Web Apps (PWA), responsive design

Backend: Node.js, Firebase, Supabase, PostgreSQL, REST APIs, webhook integration

Third-Party Integrations: Stripe, OpenAI API, OAuth providers

PROJECTS

PayTogether & myFPL | 2025 - Present

Product Developer & Designer

- Owned full product lifecycle from concept to launch for two production apps (expense-splitting and Fantasy Premier League assistant) live on web and Google Play.
- Designed UI/UX including custom theming system, responsive layouts, and mobile-first experience.
- Managed product operations including user acquisition strategy and customer support.

EDUCATION

Flatiron School | Software Engineering Bootcamp | 2022

Full-stack JavaScript development with focus on React, Node.js, databases, and web application architecture.

George Mason University | B.S. Economics | 2017
