SUMMARY

Regulatory specialist with 3 years translating pre-trade and post-trade regulations into executable decision logic for tier-1 and tier-2 investment banks. Covers transaction reporting, eligibility, uncleared margin, and clearing across EMIR, MiFID II, CFTC, and Dodd-Frank. Partners with compliance, legal, and engineering to deliver client-facing specifications.

EXPERIENCE

Knowledge Engineer | Droit Fintech | 2023 – Present

- Encode requirements from global trading regulations into executable decision logic and client-facing specifications used by 20+ tier-1 and tier-2 investment banks for trade reporting, margin, and clearing determinations.
- Shipped 15+ client mandates end-to-end (scoping through production deployment) and contributed to 50+ additional mandates across 20+ jurisdictions; function as a first line of regulatory review across compliance, legal, and engineering stakeholders.
- Triage regulatory incidents and client questions across multiple asset classes; assess business impact, determine required logic changes, and document remediation for downstream tracking and audit trail.
- Monitor and analyze regulatory developments across major jurisdictions and translate phase rollouts, reporting amendments, and margin phase-ins into actionable client briefings and specification updates.

Independent Software Developer | MajaLabs LLC | 2022 – Present

- Designed, built, and shipped two production apps with real user bases: PayTogether (expense-splitting) and myFPL (sports analytics), both live on web and mobile.
- Integrated Stripe payments (subscriptions, webhooks, customer portal), implemented authentication with session management and row-level security, and operated end-to-end production deployments.
- Contributed to AWS Amplify open-source developer tooling through the MLH Fellowship: code reviews and feature implementation.

Documentation Analyst | YRCI | 2019 – 2021

- Abstracted complex international lease agreements into structured data using specialized extraction tooling, maintaining accuracy against source documents and client specifications.
- Built Excel macros and automated workflows that reduced manual effort by ~50% while improving data quality and consistency.
- Led QC review cycles and peer training; enforced documentation standards and control procedures across the team.

SKILLS & KNOWLEDGE

- **Regulatory frameworks:** EMIR Refit, MiFID II RTS 22, CFTC Parts 43/45, Dodd-Frank Title VII, BCBS-IOSCO uncleared margin rules, UTI generation, clearing requirements, transaction reporting, position limits.
- **Compliance operations:** regulatory analysis, gap identification, issue triage, control documentation, cross-functional partnership with compliance, legal, and engineering.
- **Technical:** JavaScript/TypeScript, SQL, REST APIs, data modeling; able to read code, engage credibly with engineering teams, and work within technical systems.
- **Tools:** structured specification authoring, decision logic modeling, regulatory change management.

EDUCATION

George Mason University | B.S. Economics **Flatiron School** | Software Engineering Bootcamp
